

TheraPsil's Treatment Teams

Co-sitter

Co-sitter: A therapist should never work alone. Having a strong support system throughout the dosing journey is important, and that is the job of a co-sitter. The majority of our co-sitters are those who do not have a clinical background but would like to support a patient through their journey. They are involved in the last preparation session, the full dosing session, and the first integration session.

Medical Associate

Medical Associate: Graduate MDs and Nurse Practitioners without psychotherapy experience who complete Units 1-11. Medical Associates will have full treatment training and thus may act as a co-sitter and assist with treatment; prescribers without this training may not.

Provisional Associate

Provisional Associate: A trainee with 5 years of clinical experience and Units 1-11, who is approved as **a Provisional Associate is able to function as a primary therapist and accept patient referrals on the condition that they are actively pursuing completion of their Unit 12 Supervision requirement.**

Psychotherapy Associate

Psychotherapy Associate: A trainee who has completed Units 1-12. Psychotherapy Associates are made available to prospective patients seeking treatment through TheraPsil. Two hours of supervision/year is required to maintain Associate status.

Prescriber

Prescriber: Trainees who have completed the TheraPsil Prescriber training are eligible to support patients with their Special Access Program ('SAP') application. Prescribers cannot co-sit during experiences without completing the Fundamentals training.
